Gabriel Shock Absorbers - Introduction

Gabriel manufactures a comprehensive range of shock absorbers that are designed and engineered to suit the conditions of South African roads and also its vehicle park.

Drivers who use Gabriel shock absorbers comment on the smooth ride of their vehicles, however shock absorbers are not just for comfort; as their primary purpose is to keep wheels in contact with the road surface. Shock absorbers also affect the steering, handling and braking of your vehicle, which is why they are vital for your safety.

Our years of research and testing has resulted in Gabriel developing a shock absorber that is firm enough to prevent the wheels from leaving the road surface, but also flexible enough in their damping to ensure that the occupants are not directly subjected to the vehicle forces.

Our shock absorbers limit the bounce of the wheels by controlling the rate at which the suspension springs compress and extend. In so doing, the shock absorber helps maintain traction and control of the body, as well as the pitch and roll of the car during cornering, braking and acceleration. With more accurate control and steering, Gabriel shock absorbers enhance safety through good road holding.

Gabriel® Fleet Ryder® - Introduction

The Gabriel® Fleet Ryder® series offers an extensive range of robust and genuine extra large bore, South African shock absorbers designed to meet the pressing requirement of today's heavy commercial vehicle applications.

Providing a firm yet comfortable ride with a fast response time the Gabriel® Fleet Ryder® series and its Gabriel warranty delivers up to its historical South African pedigree and provides for total driving peace of mind.

Gabriel® Fleet Ryder® Shock

Product Features

- Ø41 and Ø52 Extra large bore working cylinder
- Designed for standard and air suspensions
- Single or multi lip rod seals
- Viton or rubber rod seals
- Cast iron piston ring
- Sintered metal rod guides
- Metal dust covers
- Natural mounting bushes
- Gabriel 12 month warranty

Product Benefits

- The extra large big bore working cylinder will reduce the stress on the working components of the shock absorber thereby increasing the durability of the shock.
- Specifically designed for both normal and air suspension systems
- Designed to be a replacement for most shock absorbers working in conjunction with air suspension systems
- High temperature oil or extra high temperature oil depending on the application
- Cast iron piston ring to improve durability
- Metal dust covers to protect the shock absorber from the damage due to stones and rocks typically associated with commercial applications
- Rust inhibiting finish applied to shaft (chrome plated & trication of zinc phosphate)
- Manufactured locally to the highest quality standards using premium quality components
- Gabriel 12 month warranty
